LOKSWAMI PLANNING

Four-Role Newsroom Admin Plan

A locked newsroom operating model for Lokswami that separates business control, newsroom operations, reporting, and copy-editing into four clear admin roles.

ROLES

Super Admin, Admin, Reporter, Copy Editor

CORE RULE

Only Super Admin can access System Settings

OPERATIONS OWNER

Admin owns full newsroom user management

IMMEDIATE FOCUS

- Reduce admin roles to the final four-role newsroom model.
- Move day-to-day staff management into the Admin panel.
- Keep business, revenue, and system controls with Super Admin only.

Summary

Lock the admin app to **four newsroom roles only**: `super_admin`, `admin`, `reporter`, and `copy_editor`.

- **Super Admin**: business and platform control only
- **Admin**: full newsroom operations and user management
- **Reporter**: create and submit content
- **Copy Editor**: quality and editing desk

Hard rule: **only Super Admin can access System Settings**. Admin gets full newsroom user management, but cannot create, edit, or remove a Super Admin.

Final Role Model

ROLE	MAIN PURPOSE	ALLOWED PANELS
super_admin	Owner, business, and platform control	Analytics Dashboard, Revenue & Ads Control, System Settings, Audit Log, Permission Review, Operations Diagnostics
admin	Newsroom operations boss	User Management, Story Approval, Assignment Desk, Content Queue, Push Alerts, Newsroom Settings
reporter	Submission desk	Submit Stories, Upload Media, Location Tagging, Source Info, My Drafts, My Submissions
copy_editor	Quality desk	Edit & Proofread, Fact Checking, Headline Writing, Image Optimization, Return for Changes

User-Management Boundary

- **super_admin** can create and manage all roles, including `super_admin`
- **admin** can create and manage only `admin`, `reporter`, and `copy_editor`
- **admin** cannot create or edit `super_admin`, demote the last `super_admin`, access System Settings, or access Revenue & Ads Control

Newsroom Workflow

Workflow States

- `draft`
- `submitted`
- `assigned`
- `copy_edit`
- `changes_requested`
- `ready_for_approval`
- `approved`
- `scheduled`
- `published`
- `rejected`
- `archived`

Role Actions

Reporter: create draft, upload media, fill location tagging, fill source info, submit, revise on changes requested.

Copy Editor: proofread, fact check, rewrite headline, optimize image, return for changes, mark ready for approval.

Admin: review, assign, manage queue, approve/reject, schedule/publish, send push alerts, manage newsroom users.

Super Admin: analytics, ads/revenue, system state, audits, permissions, emergency override.

Workflow Path

1. `super_admin` creates the first newsroom staff
2. `admin` manages day-to-day newsroom users
3. `reporter` creates content and submits it
4. `admin` receives it in Content Queue
5. `admin` assigns it to `copy_editor` or handles directly
6. `copy_editor` either returns `changes_requested` or marks `ready_for_approval`
7. `admin` approves, schedules, and publishes
8. `admin` optionally sends push alerts
9. `super_admin` monitors via analytics, audit, and system panels

Implementation Changes

1. Role and Permission Contract

- Admin surfaces should only recognize `super_admin`, `admin`, `reporter`, and `copy_editor`
- Migration defaults: current `author → reporter`, current `editor → copy_editor`, current `viewer → reader`
- `team` page becomes accessible to `admin` and `super_admin`
- `system_settings` becomes `super_admin` only
- `newsroom_settings` becomes `admin + super_admin`

2. Panel Structure

Super Admin

- `/admin`
- `/admin/analytics`
- `/admin/revenue`
- `/admin/settings/system`
- `/admin/audit-log`
- `/admin/permission-review`
- `/admin/operations-diagnostics`

Admin

- `/admin`
- `/admin/team`
- `/admin/review-queue`
- `/admin/assignments`
- `/admin/content-queue`
- `/admin/push-alerts`
- `/admin/settings/newsroom`

Reporter

- `/admin`
- `/admin/my-work`
- `/admin/articles?scope=mine`
- `/admin/articles/new`
- `/admin/media`

Copy Editor

- `/admin`
- `/admin/review-queue`
- `/admin/copy-desk`
- `/admin/articles/[id]/edit`

3. Team and Auth Flow

- Team invite dropdown shows `admin`, `reporter`, `copy_editor`, plus `super_admin` only when the acting user is a Super Admin
- Setup/reset link flow remains the same
- Login continues through `/signin?redirect=/admin`
- `loginId` or `email` + password remains valid

4. Reporter Submission Data

- Reporter forms must support media upload, location tagging, and source info
- Minimum content additions: `locationTag`, `sourceInfo`, optional `sourceConfidential`, optional `reporterNotes`

5. Copy-Editor Quality Data

- Track proofread completion, fact-check status, headline revision status, image optimization status, copy editor notes, and return-for-changes reason

6. Admin Operations Surfaces

- Story Approval
- Assignment Desk
- Content Queue
- Push Alerts
- User Management
- Newsroom Settings

Important API and Type Changes

- Replace old admin role vocabulary with the four-role model
- Add `ready_for_approval` and `changes_requested` to the shared workflow contract
- Split settings permissions into `system_settings` and `newsroom_settings`
- Restrict team-management APIs so only `super_admin` can manage `super_admin`
- Extend content submission/update payloads with `locationTag`, `sourceInfo`, and copy-edit review metadata

Phase-by-Phase Build Order

Phase 1: Role Cleanup

Remove viewer from admin access, map author to reporter, map editor to copy editor, update labels, keep backward-compatible user migration.

Phase 2: Permission Enforcement

Rewrite page access and action permissions, move Team/User Management to admin + super_admin, keep System Settings super_admin only, add Newsroom Settings for admin.

Phase 3: Dashboard Split

Build distinct dashboards for Super Admin, Admin, Reporter, and Copy Editor.

Phase 4: Workflow Enforcement

Implement reporter submission, admin assignment and approval, copy-editor review, and push-alert handling.

Phase 5: Form and Queue Upgrades

Add reporter metadata, copy-editor review metadata, content queue, assignment desk, and push-alert panels.

Phase 6: Migration and QA

Migrate old roles, validate access per role, verify invite/setup/login flows, and close leftover old labels/routes.

Test Plan

Permissions

- Super Admin can access system settings and revenue panels
- Admin cannot access system settings or revenue panels
- Admin can manage admin, reporter, and copy_editor
- Admin cannot create, edit, or remove super_admin
- Reporter cannot access review queue, team, analytics, or settings
- Copy Editor cannot access team, push alerts, or system settings

Workflow and Auth

- Reporter can create and submit only their own content
- Copy Editor can edit assigned items and mark ready for approval
- Copy Editor can return changes requested
- Admin can approve, reject, schedule, publish, and push alert
- Super Admin is not required for normal publishing flow
- Generated setup links, login IDs, and password reset links all work

Assumptions and Defaults

- **Revenue & Ads Control** is a dedicated Super-Admin-only surface, even if initially delivered as a placeholder
- **Newsroom Settings** is separate from **System Settings**
- **Admin** has full newsroom user management, but not platform-owner control
- **Reporter** is submission-focused, not approval-focused
- **Copy Editor** is quality-focused, not publishing-focused
- **reader** remains the non-admin public-site role

Prepared for Lokswami newsroom-admin restructuring. This document is intended as the implementation reference for role cleanup, workflow enforcement, and panel separation.
